Subject: Comment on FCC GN Docket No. 25-133 – Removal of Licensing Requirements for GPRS Radios

To Whom It May Concern,

I am submitting this comment in response to FCC GN Docket No. 25-133 to urge the Federal Communications Commission to remove licensing requirements for General Packet Radio Service (GPRS) radios when their use fully complies with established GPRS standards and regulations.

GPRS technology provides efficient and reliable communication for a variety of applications, and its operation within defined technical standards ensures minimal interference with other spectrum users. Requiring individual licenses for compliant GPRS radios imposes an unnecessary burden on users and operators, potentially stifling innovation and accessibility without providing a corresponding benefit to spectrum management or public safety.

By eliminating licensing requirements for GPRS radios that adhere to existing standards and regulations, the FCC can streamline access to this technology, promote its responsible use, and align with the principles of efficient spectrum administration. I respectfully request that the Commission consider this change to foster a more flexible and user-friendly regulatory environment.

Thank you for your consideration of this matter.

Sincerely,

Peter DuDeck
